

## FacilityOne®

Its time has come. We live in a fast-paced, ever changing business climate. Buildings are erected and often times changed before they are finished. The “As-built” often are out of date soon after the building is occupied. In some cases, getting the drawings updated is a long and involved process. With older facilities, drawings may be on paper only, marked up extensively or not exist at all. Finding the documentation for the equipment and systems that keep the facility operating may be difficult at best to find. There’s got to be a better way! **FacilityOne®** by C2 Facility Solutions is that better way.

**FacilityOne®** allows you to capture the knowledge and information concerning the facility systems that keep your facility operating – especially those critical to its operation.

**FacilityOne®** gives you a reliable, easy-to-use interactive tool to document, update, assess and manage your critical infrastructure asset information.

**FacilityOne®** can be the centralized Command and Control center for all of your facilities and their infrastructure assets, even if the facilities are scattered across the country or the world.

One of the big problems with documentation and blueprints is that they change and then have to be updated. **FacilityOne®** is easy enough to update that the maintenance technicians can do it. It doesn’t require an AutoCad specialist. If it’s easy to update, chances are better that the information will be kept up to date.

The facility manager will gain a tool to use on a daily basis to help troubleshoot electrical, mechanical, HVAC and other problems.

**FacilityOne®** allows you to successfully track ANY facility asset – even individual office contents.

Today, many companies have implemented an Emergency Response Team. **FacilityOne®** enables internal and external Emergency Response Teams to have important, up-to-date information that could mean the difference between life and death in an emergency.

While **FacilityOne®** is easy to use by the maintenance techs and the facility manager, its not a lightweight program. **FacilityOne®** provides valuable information to help the CFO/COO/CEO make better decisions concerning capital project expenditures. Decisions can be based on risk to the organization rather than simply a list of wants and desires.

**FacilityOne®** is a valuable tool for anyone responsible for the maintenance and management of your facilities. No more guess work.
