

INTEGRATING SOLUTIONS AND SERVICES:

POWER QUALITY, POWER DISTRIBUTION, POWER & FACILITY MANAGEMENT

Integrating Solutions and Services

We provide power protection and conditioning products; critical site monitoring and facility management systems; high efficiency power delivery and distribution products; precision cooling and humidity control; equipment test, maintenance and repair services; power quality audits, power efficiency audits, installation services; plant infrastructure assessment and documentation; and design consultation.

FACILITY | ONE®

FacilityONE®, Information and Knowledge!

FacilityONE® transforms any facility (retail, office buildings, manufacturing, hospitals...) into the ultimate facility. FacilityONE's web-based Facility Information Solution (FIS™) enables both executive management and front line operations people to document, manage, control and assess their facilities and associated systems. More intuitive and dramatically less expensive than traditional solutions, FacilityONE's SmartPrint® technology puts you in control of every asset, helping you to maximize uptime and efficiency.

Performance Management Solutions for the Green Data Center

Modius® is the leading provider of infrastructure management systems for measuring the availability, capacity and efficiency of enterprise data centers. The Modius® Data Center Infrastructure Manager (DCiM)™ system solves the challenge of integrating both IT and Facilities Management information into a single, comprehensive measurement system. DCiM provides both real-time dashboards as well as historical trending and analysis.

Quarter-Cycle Static Transfer Switches

LayerZero Power Systems offers a complete range of quarter-cycle Static Transfer Switches, 150-600 Amp, providing triple redundancy and exclusive Optical Fiber Based Control for highest fault tolerance and reliability. LayerZero Power Systems exclusive distribution switchboard and panel design is the only package for data centers that offers absolute circuit breaker coordination to eliminate mains tripping under high branch fault current conditions.

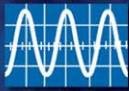

Tame Your Power, Keep Your Profits

The world's largest supplier of high power sag mitigation equipment. Omniverter corrective equipment (Active Voltage Conditioner, Power Flow Controller, Frequency Converter Active) improves system reliability by correcting events caused by voltage sags. Avoid the costs of interruptions, idle time, scrap material and loss of profits - Omniverter products require very little maintenance and are energy efficient.

UPS / CRAC / Racks / PDU's

APC & MGE are global providers of end-to-end back-up power and precision cooling products and services, which include surge suppressors, uninterruptible power supplies (UPS), power distribution equipment, power management software, and computer room cooling (CRAC) systems.

INTEGRATING SOLUTIONS AND SERVICES:

POWER QUALITY, POWER DISTRIBUTION, POWER & FACILITY MANAGEMENT

Custom LV & MV Utility Transmission & Distribution / PF Correction / Paralleling Gear / Line Filters

Shallbetter is a top-quality producer of low and medium voltage utility and industrial power switchgear, power conditioning equipment, and generator paralleling systems and automatic transfer switches. Products are customized to client's stringent design requirements using proven components, stringent design standards, and quality manufacturing techniques - flexible and responsive to meet your toughest requirements.

SF-6/Mini Substation

Power Systems provides a unique combining of SF-6 switchgear and substation transformer to create their Mini-Substation products. Mini-subs offer tremendous advantages for space and cost in many applications that would otherwise use the older and separate air-break systems and freestanding substations. Sizes available up to 3,000 kVA.

Pick Your Power

Encorp designs and manufactures advanced, digital based switchgear and generator controls, customized to varying and unique requirements. Capabilities include standby, prime power, peak-shaving, in either single genset or multi-unit / multi-vendor parallel applications. Built around the Encorp GOLDBOX controller, no system is too complex or challenging for Encorp.

Power Conditioning, Distribution, and Battery Back Up Needs

OnLine Power has become the largest manufacturer of medical power products and tap switching regulators in the world. In addition to medical power protection products, OnLine Power offers custom distribution systems, packaged power supplies, harsh environment UPS and regulator systems, monitoring systems, standard and battery-less UPS and the largest line of automatic voltage regulators available.

North America's Leader in Harmonic Mitigation Technology

Power Quality International (PQI) is presently the only manufacture with a complete line of harmonic mitigating medium and low voltage class transformers and zero-sequence harmonic filters. In addition, the PQI has acquired the exclusive rights to apply *e-Rated*® technology to its entire *HarMitigator*™ product line.

Diesel Fuel Decontamination

Clean Fuel Management (CFM) systems are self-contained diesel fuel quality maintenance systems. They are specifically designed to dry and filter stored diesel fuel to levels that exceed the recommendations of the major diesel engine manufacturers. Using a CFM system also reduces annual maintenance costs and ensures that engine start will not be impeded by contaminated fuel.
